

UDLAP Robotics Site Missing Features

1. To be able to use tables (either markdown and HTML) so we can show the projects' components lists with at least 4 columns and a customizable number of rows.
2. To be able to center and justify texts.
3. To change the favicon. PNG of the target favicon is attached.
4. To be able to copy code with a button as it is available in the markdown within GitHub.
5. To be able to put badges within a single row and that these badges remain interactive.

Example badges expected behavior:

So far, the badges have been fetched from:

- <https://github.com/lleriayo/markdown-badges>
- <https://shields.io/>

Example URLs for the badges:

- `![Amazon Alexa](https://img.shields.io/badge/amazon%20alexa-52b5f7?style=for-the-badge&logo=amazon%20alexa&logoColor=white)`
- `![ChatGPT](https://img.shields.io/badge/chatGPT-74aa9c?style=for-the-badge&logo=openai&logoColor=white)`
- `![MIT License](https://img.shields.io/badge/License-MIT-yellow?style=for-the-badge)![Not Maintained](https://img.shields.io/badge/status-not_maintained-lightgrey?style=for-the-badge)`
- `![Maintained](https://img.shields.io/badge/status-maintained-brightgreen?style=for-the-badge)`
- `![RoboDK](https://img.shields.io/badge/Uses-RoboDK-blue?style=for-the-badge&logo=robodk)](https://robodk.com/)`

6. To be able to show alerts.

Examples:

> `![NOTE]`

> Highlights information that users should take into account, even when skimming.

> [!TIP]

> Optional information to help a user be more successful.

> [!IMPORTANT]

> Crucial information necessary for users to succeed.

> [!WARNING]

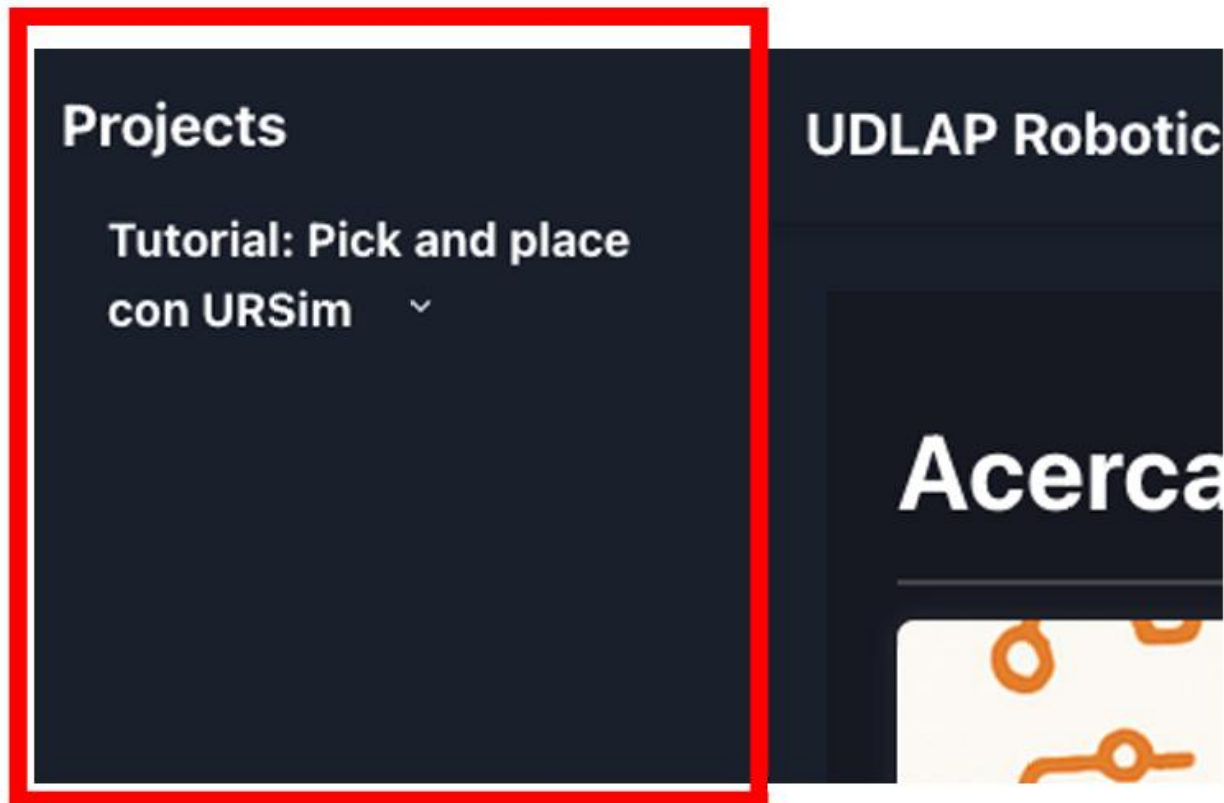

> Critical content demanding immediate user attention due to potential risks.

> [!CAUTION]

> Negative potential consequences of an action.

7. To be able to hide left panel.

Example:

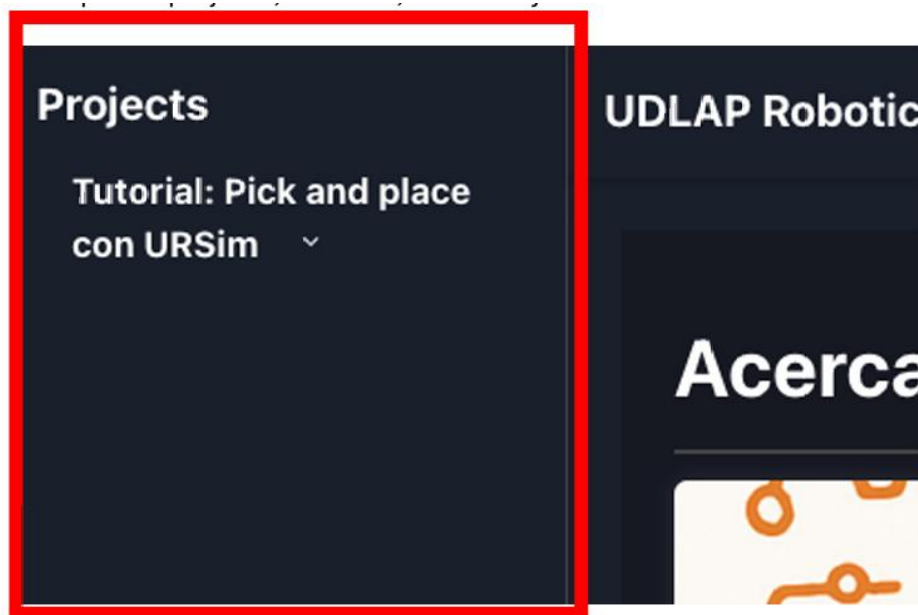

8. The “articles” should be organized in:

- Tutoriales y Recursos Educativos
- Proyectos Académicos
- Proyectos de Investigación y Aplicación

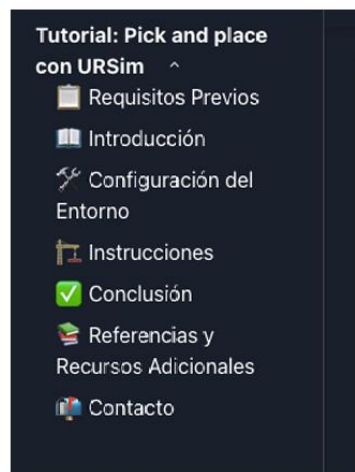

For each one of these sections, we will show the actual content that will be rendered within the app (referred now as “articles”, which is the actual markdown rendered as HTML).

The idea is that above sections are displayed in Spanish to the users, but we would have our English equivalents as JavaScript object property names.

For example, for the “Projects” section, should look like this:

9. For each article, we want the article sections to be shown by default (non-collapsed):

Here is an example of how the articles should be ultimately organized with their target parent sections, along with the actual articles' contents:
